Service Prototyping Lab - Cooperative PhD Opportunity

SPLab is an applied research laboratory under the auspices of Zurich University of Applied Sciences in Switzerland. Together with partner universities, we offer a competitive and ambitious research agenda in which successful candidates can be rewarded a doctoral degree after three to four years. Work towards your PhD degree in SPLab!

You can follow this opportunity by becoming a research assistant associated to one of the key topics of the lab: cloud-native applications, service tooling, cloud accounting and billing. Individual topics are also possible upon mutual agreement. Primarily, you will work on research projects centered around the chosen topic, often in a very applied setting in conjunction with local companies. This gains you the best combination of industry experience and a research/lab environment in which we aim to solve hard and significant problems!

If you find an open assistant position linked to our lab, please apply directly and state your aim to conduct a cooperative doctorate. Even if no position is currently open, please send us your motivation letter, CV and brief research plan sketch so that we can discuss possible options.
